

Security that works. Together.

**Network
Security**

**User and Endpoint
Protection**

**Cloud
Edge**

**Application
Security**

As a security professional today, you're dealing with unprecedented challenges. Your business leaders want you to secure everything with limited resources, while your infrastructure continues to evolve and become more complex. But it doesn't have to be this way.

When security products communicate and work together, you get better, less resource-intensive protection. An integrated platform can deliver in-depth analytics, streamlined security management, and accelerated incident investigation and response.

The **Cisco Secure** portfolio consists of a broad set of technologies that function as a team – providing seamless interoperability with your security infrastructure, including third-party technologies. This results in unified visibility, automation, and stronger defenses. Through the built-in **Cisco SecureX** platform, the following products combine to safeguard your network, users and endpoints, cloud edge, and applications.

Cisco Secure offerings are strengthened by:

- A zero-trust approach to security
- Unrivalled threat intelligence
- Integration and openness
- A simplified consumption and buying experience

Network Security

Cisco Next-Generation Firewall

- Stop more threats and swiftly mitigate those that do breach your defenses.

Cisco AnyConnect

- Empower remote workers with frictionless, highly secure access to your network.

Cisco Stealthwatch

- Obtain enterprise-wide visibility, behavioral analytics, and threat detection.

Cisco Identity Services Engine (ISE)

- Enable secure network access, segmentation, and threat containment.

Cisco Web Security

- Automatically block risky websites and test unknown sites before allowing users to click on them.

Cisco Meraki MX

- Safeguard your network with 100% centrally cloud-managed security and SD-WAN.

User and Endpoint Protection

Cisco Duo

- Verify the identity of users and inspect the devices trying to access your applications.

Cisco Advanced Malware Protection (AMP) for Endpoints

- Prevent attacks on your devices and quickly respond to threats.

Cisco Email Security

- Defend against spam, phishing, ransomware, and business email compromise. Enhance Office 365 security.

Cisco Security Connector

- See and block malicious traffic on iOS devices.

Cisco Meraki SM

- Secure endpoint devices with cloud-based mobile device management.

Cloud Edge

Cisco Umbrella

- Shield users from unsafe Internet destinations whether they are on or off the network.

Cisco Cloudlock

- Protect cloud users, data, and applications to more easily combat data breaches.

Cisco Stealthwatch Cloud

- Easily extend in-depth visibility and threat detection to the cloud.

Application Security

Cisco Tetration

- Gain advanced workload protection with application visibility and micro-segmentation.
