Security threats continue to evolve, yet most organizations remain reliant on reactive, technology based, security solutions to protect their most valuable assets. Technology alone does not fully protect against a determined attacker. And it’s difficult and costly to find, hire, train and retain security experts, especially those who specialize in finding covert threats.

You need a trusted partner to monitor your network around the clock with a pro-active, analyst-driven approach leveraging the latest threat intelligence cultivated from frontline experience. You need FireEye Managed Defense.

**Intelligence-Led Detection and Response**

FireEye Managed Defense is a managed detection and response (MDR) service that combines industry-recognized cyber security expertise, FireEye technology and unparalleled knowledge of attackers to help minimize the impact of a breach.

Managed Defense is continuously fueled by the industry’s largest global cyber threat intelligence capability that harnesses machine, campaign, adversary and victim intelligence gained on the front lines of the world’s most consequential cyber attacks. This frontline intelligence and expertise drives detection and guides our analysts’ hunting and investigation activities to reveal even the most sophisticated attacker. Security analysts provide a comprehensive assessment of attacker activity along with customized response recommendations, delivering the context needed to understand threats, assess risk and take definitive action.

**How It Works**

FireEye Managed Defense uses our proprietary technology stack to provide real-time visibility across the enterprise, including ICS and cloud infrastructure.

FireEye Managed Defense analysts leverage adversary, victim and machine-based threat intelligence to detect, investigate and proactively hunt for known and previously undetected threats.

When signs of compromise are confirmed, you are notified immediately and can review the latest findings via a secure portal while our analysts continue to investigate the incident.

You also receive a detailed summary report that provides threat context along with remediation recommendations to form an effective response and help prevent attackers from completing their mission.
Understanding The Attacker
To anticipate and respond to today’s increasingly sophisticated and targeted cyber attacks, you need to understand attacker motivations, intentions, characteristics and methods. This understanding comes from the knowledge gained through frontline experience.

Managed Defense analysts use proprietary investigative techniques to discover signs of intrusion, learn how attackers are operating and assess the depth of their capabilities.

Experienced analysts also use market-leading threat insights on nearly 16,000 threat actors, including more than 30 nation-state sponsored groups, ranging from China-based advanced persistent threats to Russia-based attackers.

This behavioral insight into how attackers operate enables our analysts to quickly assess a situation, scope the extent of the attacker’s operational capabilities, anticipate their next move and deliver an effective plan for response.

**Figure 1. Intelligence-led detection.**

**Comprehensive Hunting**
FireEye Managed Defense takes a proactive, analyst-driven approach to hunting, where experienced analysts apply combined knowledge and understanding of attackers and their tactics, techniques and procedures (TTPs) when searching for signs of malicious activity. Managed Defense analysts systematically hunt for evidence of new TTPs from threat actors that continuously evolve and change their methods to try to establish a foothold in target environments while attempting to evade detection.

The proprietary hunting techniques created and used by our analysts are continuously updated and adapted based on intelligence gained through other Managed Defense customers, consulting engagements with FireEye Mandiant, and FireEye Threat Intelligence capabilities.

**Campaign Response**
As a Managed Defense customer, you’ll benefit from the knowledge and experience FireEye gains by protecting over 6300 customers at the frontlines of cyber attacks.

As we observe attempted attacks on organizations similar to yours based on industry, region or technology profile or if we notice any changes in attacker techniques, we immediately start scanning for evidence of these attacks in your network. If you are not compromised, but we have evidence that you may be targeted, we will provide you with recommended steps to immunize you from the expected attack.

---

**Why Managed Defense**

**Experience**
Draw on the experience of Mandiant incident response teams, who spend 100,000+ hours per year on the most impactful breaches.

**Faster Detection**
Median time to investigate and respond with Managed Defense is 67 minutes.

**Cost Effective**
Development and maintenance of in-house capabilities can take a lot of time, money and resources.

**Intelligence**
Access to nation-state grade intelligence collection supported by 150+ intelligence analysts.

**Powerful Defense**
Proprietary technology stack incorporates FireEye technology and intelligence:
- 150 million FireEye product detections
- 22 million Managed Defense alerts ingested
- 170 thousand Analyst Investigations
- 91% of high priority threats resolved without Rapid Response
- 98% of Rapid Response incidents resolved without full incident response.
Identify and Prioritize Critical Threats
FireEye Managed Defense analysts focus on the most impactful threats, cutting through the noise of many and often irrelevant alerts from other products to save your team time and effort. You’ll benefit from the collective knowledge of our analysts and incident responders to identify threats that have the greatest potential impact, including those that may have evaded traditional security controls.

Incident Scoping
During an investigation, Managed Defense analysts will review all of the alert artifacts using all FireEye intelligence, inspect network traffic or endpoints to determine the extent of the compromise and identify the timeline across the kill chain by pulling together all applicable events. Analysts scope out the incident using proprietary techniques and intelligence gleaned from more than 100,000 hours of incident response services.

Rapid Response
For more severe attacks, Managed Defense analysts may potentially bring in additional expert resources from our malware, intelligence and incident response teams to deliver an in-depth analysis of triaged events and search across your ecosystem to determine the full extent of compromise.

Remediation Recommendations
Once we’ve investigated and provided an assessment, Managed Defense analysts provide remediation recommendations to expedite your response.

When warranted, Managed Defense enables you to easily transition to a full incident response engagement with FireEye Mandiant at preferred rates.

Guidance and Insight
As a Managed Defense customer, you’ll receive access to a secure portal, which provides a conduit for customer communication, collaboration and access to reporting and intelligence. You’ll also be assigned a Managed Defense Consultant (MDC) to serve as your day-to-day contact. MDCs are experienced professionals with expertise in incident response and forensics, and provide strategic recommendations to help you improve your security posture.
