

FortiClient

Lock down visibility and control of your software and hardware inventory across the entire security fabric. Identify vulnerable or compromised hosts and track all details of systems and user profiles across your attack surface.

Security Fabric Integration

Provides endpoint awareness, compliance and enforcement by sharing endpoint telemetry.

Advanced Threat Protection

Automates prevention of known and unknown threats through built-in host-based security stack and integration with FortiSandbox.

Secure Remote Access & Mobility

Easy-to-use secure remote access via SSL and IPsec VPN.

EMS for Central Management

- Simple & User Friendly UI
- Remote FortiClient Deployment
- Realtime Dashboard
- Active Directory Integration
- Automatic Email Alerts
- Supports Custom Groups
- Remote Triggers

FortiClient connects every endpoint to form a cohesive security fabric

Advanced Threat Protection

As a next-generation endpoint protection solution, FortiClient helps connect endpoints to FortiSandbox, which uses behavior-based analysis to automatically analyze in real-time all files downloaded to FortiClient endpoints. Millions of FortiClient and FortiSandbox users worldwide share information about known and unknown, malware with cloud-based FortiGuard. FortiGuard automatically shares the intelligence with other FortiSandbox units and FortiClient endpoints to prevent attacks from known and unknown malware.

Security Fabric Integration

As a key piece of the Fortinet Security Fabric, FortiClient integrates the endpoints into the fabric for early detection and prevention of advanced threats. Security events including zero-day malware, botnet detections, and vulnerabilities are reported in real-time. The deep real-time visibility into the network allows administrators to investigate and remotely quarantine compromised endpoints. Our endpoint compliance & vulnerability detection features enables simplified enforcement of enterprise security policies protecting endpoints from becoming easy targets.

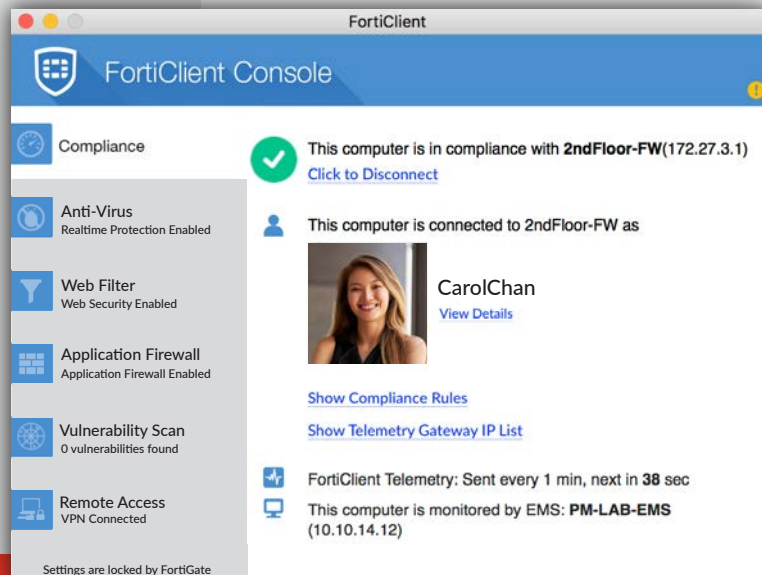

Secure Remote Access & Mobility

FortiClient uses SSL and IPSec VPN to provide secure, reliable access to corporate networks and applications from virtually any internet connected remote location. FortiClient simplifies remote user experience with built-in auto-connect and always-up VPN features. Two-Factor authentication can also be used to provide additional layer of security. Feature like, VPN auto-connect, Always up, Dynamic VPN Gateway Selection and split-tunneling ensures smooth user experience on all device types connecting from home or public places.

Anti-Exploit adds another layer of protection. It protects against zero-day attacks that target applications that have undiscovered or unpatched vulnerabilities without relying on signatures like traditional anti-virus.

- **Protects against zero-day** attacks targeting undiscovered or unpatched application vulnerabilities
- **Protects against various memory techniques** used in an exploit
- **Shields web browsers**, Java/Flash plug-ins, Microsoft Office applications, and PDF Reader
- **Detects and Blocks** the use of exploit kits
- **Signature-less** solution

Key Features

EMS provides ability to centrally manage Windows, Mac, iOS and Android endpoints

- **Remote FortiClient Deployment** that allows administrators to remotely deploy endpoint software and perform controlled upgrades.
- **Centralized Client Provisioning** makes deploying FortiClient configuration to thousands of clients an effortless task with a click of a button.
- **Windows AD Integration** helps sync organisations AD structure into EMS so same OUs can be used for endpoint management.
- **Realtime Endpoint Status** always provides current information on endpoint activity & security events.
- **Vulnerability Dashboard** helps manage organizations attack surface. All vulnerable endpoints are easily identified for administrative action.
- **Email Alerts** helps notify administrators of any critical events so they can be attended on priority.

FortiGate provide awareness and control over all your endpoints

- **Telemetry** provides real-time endpoint visibility (including user avatar) on FortiGate console so administrators can get a comprehensive view of the whole network.
- **Compliance Enforcement** can be used to enforce organisations security policies. Only authorized and compliant endpoints with no security risks are granted access.
- **Endpoint Quarantine** helps to quickly disconnect a compromised endpoint from the network and stop it from infection other assets.

Specifications

FORTICLIENT

Operating System Supported:

Microsoft Windows 10, 8.1, 7, Windows Server 2008 R2 and Windows Server 2012, 2012 R2, 2016
Mac OS X v10.12, v10.11, v10.10, v10.9, v10.8
iOS 5.1 or later (iPhone, iPad, iPod Touch)
Android OS 4.4.4 or later (phone and tablet)

Authentication Options

RADIUS, LDAP, Local Database, xAuth, TACACS+, Digital Certificate (X509 format), FortiToken

Connection Options

Auto Connect VPN before Windows logon, IKE Mode config for FortiClient VPN IPsec tunnel

Note: All specifications are based on FortiClient 5.6.

FORTICLIENT EMS

Operating System Supported

Microsoft Windows Server 2016, 2012, 2012 R2, 2008 R2

Endpoint Requirement

FortiClient version 5.6 or newer, FortiClient for Microsoft Windows and Mac OS X, 5.4 for iOS and Android

System Requirements

2.0 GHz 64-bit processor, dual core (or two virtual CPUs), 4 GB RAM, 20 GB free hard disk, Gigabit (10/100/1000BaseT) Ethernet adapter Internet access
