

Chrome OS Services for every organization.

CDW gets Chrome OS and has services to help organizations at every step of their technology transformation. Whether it's your first time managing Chrome devices, or you've had a successful pilot and are ready to deploy across your entire organization, CDW has you covered.

Evaluate & Prepare

Run a **proof of concept or pilot** of Chrome OS with up to 150 devices. Launch the solution to the pilot users and evaluate Chrome OS with their use cases. CDW will help setup your devices, identify any challenges, and refine a final adoption strategy to scale up.

Organizational Rollout

Quickly go from proof of concept to **organizational standardization** of Chrome OS devices. CDW resources can help your organization plan, communicate, train, and migrate users to your Chrome OS environment. Our resources have helped education, commercial, and healthcare organizations of all sizes with integrating and rolling out Google technology.

Managed Services & Support

Full support and management of your entire Chrome OS device lifecycle. CDW resources have the experience and knowledge to help your organization support your Chrome OS users and management platform for the long-term.
