

GIVE YOUR BUSINESS SPEED, AGILITY WITH EVERYTHING AS A SERVICE

As boardroom expectations change from emphasizing ownership to focusing on speed and agility, consumption-based IT is replacing large capital investments in IT infrastructure.

“

IDC reports that by 2023, 60% of organizations will use flexible, lower-cost consumption-based IT models.¹”

¹ IDC FutureScape: Worldwide Datacenter
2019 Predictions, IDC, October 2018

IS YOUR TRADITIONAL INFRASTRUCTURE HOLDING YOU BACK?

Across the world, digital transformation has helped organizations create new and compelling customer experiences, differentiate their business, and grow revenue. Unfortunately, the current paradigm for enterprise technology underserves the market—inconsistent experiences between the data center and cloud; inflexible, expensive, and proprietary stacks that constrain choice; and limited in-house IT skills, budgets, and options for financing.

EVOLVE TO CONSUMPTION-BASED IT WITH HPE

Hewlett Packard Enterprise resets the digital opportunity with a robust as-a-service portfolio that provides flexibility and speed to market. This starts with HPE's commitment to offer its entire portfolio through a range of subscription-based, pay-per-use, and as-a-service offerings by 2022. With an expanding line of services that span the entire infrastructure to full platform offerings and completely managed public and private clouds, HPE is favorably positioned to help you build the right digital foundation for your business.

THE HPE ADVANTAGE

HPE offers **real consumption models**, based on metered IT with utmost visibility and granularity into usage and costs. With a full portfolio of as-a-service offerings spanning infrastructure on-premises to managed public clouds, HPE can help you meet the business needs you have today, and grow with you as those needs evolve.

HPE has the experience of delivering **proven reference architecture** as well. That's vital for your new and existing digital transformation-driven IT projects. Our IT infrastructure solutions wrapped with a **comprehensive services approach** to manage hybrid cloud represent the future IT operating model for your business. This approach enables you to holistically focus on project delivery rather than working with multiple suppliers and managing the inherent risks. What's more, our **deep set of partnerships** lets you combine the software you prefer with industry-leading hardware and services from HPE—all managed for you in a single pay-per-use model.

UNLEASH YOUR BUSINESS WITH EVERYTHING AS A SERVICE FROM HPE

Consumption-based IT offers the flexibility of cloud with the control, security, and reliability found in on-premises data centers. Bring in the benefits of consumption-based IT with HPE that delivers everything as a service for your apps and data.
