Small and medium businesses may have smaller workloads than large-scale enterprises, but that doesn’t mean that they aren’t mission critical or demand the best performance. However, traditional 3-tier IT infrastructure to support these applications is expensive to implement, requires a team of skilled support resources, and doesn’t grow easily as the business expands.

Hyper-converged infrastructure (HCI) is supposed to help by making deployment and management simple. But once costs such as software licensing get factored in, HCI deployments are still cost-prohibitive for many.

The HC3 HCI solution from Scale Computing and Lenovo solves that problem - now enabling small and medium businesses to provide enterprise reliability and performance for their applications at price that fits their budgets.

**LENNOVO ON DEMAND: SCALE COMPUTING HC3**

**MICRO DATA-CENTER-IN-A-BOX FOR SMALL & MEDIUM BUSINESS**

Small and medium businesses may have smaller workloads than large-scale enterprises, but that doesn’t mean that they aren’t mission critical or demand the best performance. However, traditional 3-tier IT infrastructure to support these applications is expensive to implement, requires a team of skilled support resources, and doesn’t grow easily as the business expands.

Hyper-converged infrastructure (HCI) is supposed to help by making deployment and management simple. But once costs such as software licensing get factored in, HCI deployments are still cost-prohibitive for many.

The HC3 HCI solution from Scale Computing and Lenovo solves that problem - now enabling small and medium businesses to provide enterprise reliability and performance for their applications at price that fits their budgets.

**ENTERPRISE PERFORMANCE & RELIABILITY FROM THE INDUSTRY LEADER**

Ranked #1 in reliability and customer satisfaction amongst x86 servers, Lenovo ThinkSystem provides the ideal hardware platform for the Scale Computing HC3 solution. Combined with the innovative Scale Computing HyperCore software and backed by ScaleCare Support, the HC3 provides small and medium business customers enterprise-grade performance and reliability in a simple, cost-effective package.
WHAT MAKES HC3 DIFFERENT?

**SIMPLICITY**
- Unified Management
- Pre-configured Storage
- Deploys in less than an hour

**SCALABILITY**
- Start as small as a single node
- Seamless scale-out
- Mix-and-match models

**AVAILABILITY**
- Self-healing
- Built-in backup/replication
- 24/7/365 ScaleCare support

**AFFORDABILITY**
- Complete solution stack
- No software licensing costs
- Lower TCO

RECOMMENDED SOLUTIONS BUILT ON LENOVO THINKSYSTEM

**SR250 & ST250 HC3 HE500 SERIES**
Flexible rack & tower options
- Powered by an Intel Xeon E-2100 4 or 6-core processor
- Up to 64GB of RAM
- All HDD, Hybrid, and All-Flash storage options with up to 32TB capacity

**SR630 HC3 HC1250 SERIES**
Increased power for demanding applications
- Powered by a single or dual Intel Xeon Scalable Processors
- Up to 768GB of RAM
- Hybrid and All-Flash storage options with up to 31.7TB capacity
