

ZSCALER and CDW

**TOGETHER PROVIDE
COMPETITIVE NONPROFIT
PRICING.**

Focused on using cloud computing to revolutionize the world of Internet security, Zscaler® protects against cyberattacks and data breaches while staying fully compliant with organizational and regulatory policies.

Zscaler's Security Cloud is a comprehensive, carrier-grade Internet security and compliance platform running in more than 100 data centers around the globe. Zscaler acts as a series of checkpoints in between your organization and the public Internet, scanning all incoming and outgoing traffic between any device, anywhere in the world, and the Internet to identify and block potential threats and to protect your intellectual property.

Zscaler delivers advanced persistent threat (APT) protection, data loss prevention, SSL decryption, traffic shaping, policy management and threat intelligence – all without the need for on-premises hardware, appliances or software.
