

CDW IT ASSET MANAGEMENT: PROJECT-BASED ENGAGEMENTS

Gain Better Visibility Into Your Assets

Given the pace of technological change and the ever-growing demand to do more with less, organizations today require dynamic methods for managing their IT investments.

Begin your IT asset management (ITAM) practice with help from CDW.

Project-Based Engagement

Gain better visibility into your license position

Targeting a specific publisher or a small set of publishers, the Project-Based Engagement assesses real data rather than relying on estimates to show you where you stand. It includes:

- Comprehensive software and hardware discovery, ensuring you have visibility to understand what assets are deployed
- Creates a milestone that can be used for annual true-ups, contract renewals, hardware specifications, and personnel changes using an industry-leading ITAM solution
- Entitlement aggregation, in which our team applies licensing rules to your environment to properly assign entitlements
- An effective license position for the chosen publisher(s)
- Recommendations for license remediation, contract adoption and cost-effective controls
- Each engagement acts as a working proof of concept, allowing you the option of purchasing the technology solution and building on these outcomes, using these engagement results as the starting point

ITAM Assistance at Every Stage

Project-Based Engagements are just one piece of the puzzle. CDW has offerings in the following areas of ITAM to meet your needs.

Project-Based Engagement

Maturity Assessment

Technology Solutions

Ongoing Solutions
